PREFACE

The Directory of Biomedical Institutions in the Union of Soviet Socialist Republics has been prepared in order to provide U.S. biomedical scientists and librarians with a guide to the organization, scope, and geographic distribution of Soviet medical and biological institutions. This publication is a completely new edition of Public Health Service Publication No. 587, Directory of Medical and Biological Research Institutions of the U.S.S.R., published in 1958. The new Directory includes biomedical research institutions, administrative bodies responsible for medical education and health services, hospitals, clinics, dispensaries, sanitoria and rest homes, learned societies, libraries, and schools.

The main section of the Directory contains an alphabetical listing of the institutions, supplemented by a Geographic Index and a Classified Index. Immediately preceding the main section is a list of symbols and abbreviations used throughout the Directory. The institutional listing contains 1,569 entries, arranged alphabetically by the transliterated Russian language name. Each entry is prefaced by a sequential four-digit number. The numbers are used to identify the institutions listed in the Geographic Index and Classified Index. Numbers 0513, 1187, 1405, and 1482 were omitted for lack of sufficient data. Translated names, addresses, if known, administrative affiliations, and head personnel are included for each institution. Where the name of the city, town, etc., differs from that of the province or territory (oblast' or kraĭ) the latter is also given.

Supplement I, the Geographic Index, is an alphabetical listing of the constituent republics, regions, provinces, cities, and towns in which the institutions are located. Numbers given under each geographic designation refer to the institutions identified in the main section of the Directory. Supplement II, the Classified Index, is arranged categorically, according to the type of institution, such as hospital, library, school, etc., with the institutions identified numerically, as above.

Entries contained in the Directory were collected from the original Soviet publications, which frequently tend to be inconsistent in the use of institutional names and the listing of personnel within institutions. For example, a university may be referred to as gosudarstvennyi universitet or gosudarstvennyi; a hospital may be called Moskovskaya bol'nitsa #2 or 2-ya moskovskaya bol'nitsa. In this Directory, only one main entry is used for an institutional name, and other names are listed with a See reference to the main entry. Because of the variance in personnel listings, some institutions may list one or more individuals for the same position. Personnel positions and institutional locations are listed in the closest English equivalent of the original Russian term, e.g., "chair" for kafreda, "province" for oblast', "territory" for kraĭ, etc.

The Directory was prepared for the National Library of Medicine by Mordecai Hoseh, Ph.D., under Public Health Service Contract No. PH43-63-592 with Fordham University.
